

PayGate Designer - Workflow & Mapping

PayGate is the next generation payments gateway from CORVID PayGate.

PayGate Designer offers you unrivalled freedom and flexibility to fit seamlessly alongside your unique ways of working and become a part of your company's DNA, adapting and growing as you do.

Supporting our PayGate product family, PayGate Designer is a rich visual suite providing two highly intuitive and sophisticated tools that enable full customisation and enhancement of your payment submissions.

At CORVID PayGate, we know that no two companies are alike and we understand the challenges that come with operating a secure global payments operation.

File Mapping

PayGate Designer's File Mapping offers a file conversion facility – ensuring that you are free to use any input sources for your payment files that best suits your business.

The File Mapping component will take the source files, and allow you to quickly and simply convert them via our unique algorithm to map against the format requirements for payment submission in all supported standards (e.g. Bacs, Faster Payments, SEPA etc).

Mapping is achieved via a simple drag and drop interface, making it virtually fool proof to set up, as well as highly customisable for changes you might need to make on the fly or in response to any planned changes.

PAYGATE DESIGNER OFFERS YOU UNRIVALLED FREEDOM AND FLEXIBILITY TO FIT SEAMLESSLY ALONGSIDE YOUR UNIQUE WAYS OF WORKING.

As a consequence, if you change your software applications, acquire a new business that has different software, or they operate in a different geography, then you can quickly and simply onboard and integrate them into the PayGate platform as they are – meaning no downtime or missed payments, and a consistent corporate approach to payments.

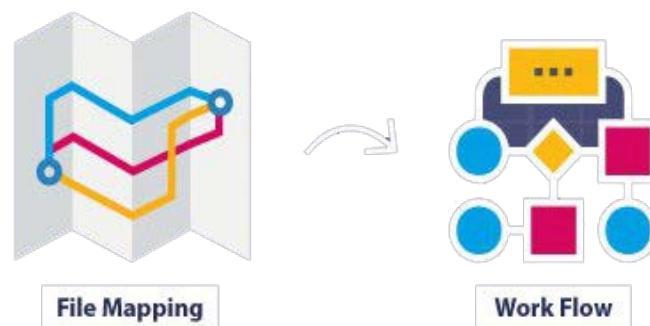

Automated Process Workflow

With PayGate Designer's Process Workflow you can unlock the full potential of the PayGate platform. It goes beyond basic payment processing with a rich visual workflow tool that allows extensive process manipulation and automation to align with even the most complex of corporate business processes.

The simple graphical interface allows you to easily customise payment rules, transformations of data and workflow to suit your business. From establishing core rules to determine the best method for submitting information, determining who needs to authorise a payment and prompting them to do so, or enabling the management of individual payments so they can be automatically consolidated and forwarded to the correct clearing system (across geographies with automatic least cost routing and reconciliation); PayGate Designer will support you whatever your business goals are.

When used in conjunction with the PayGate Hardware Security Module (HSM), the PayGate Designer Process Workflow tool can help you achieve straight through processing (STP) – speeding up cycle times and reducing your costs and overheads.

Reconfiguration can be completed quickly and simply, meaning you are able to react to any regulatory and localised changes as they happen, ensuring a consistent and compliant solution across your entire business

EASY-TO-USE BACS APPROVED SOFTWARE THAT ENABLES BUSINESSES TO MANAGE AND SUBMIT FILES TO THE BACS AND FASTER PAYMENTS SERVICE.

PayGate Designer Summary

PayGate Designer works with your desired payment submissions for all our supported standards (e.g. options for Bacs, Faster Payments, SEPA etc). Unlike other providers, when you opt for these payment submission standards, we provide the full functionality to you, along with comprehensive training to help get you set up and on your way.

There are no hidden charges or limitations, or any expensive professional service fees if you want to make any “in life” reconfigurations to a workflow or file mapping.

Our dedicated support team are available to support you as standard, but otherwise you are free to customise and make changes whenever best suits your business and at no extra cost.

Benefits
